Microsoft onedrive sign in problems

@motytschak Outlook and OneDrive work fine. @LunnMolly anyone else a drive down? Last page updated by dwnndetector.com It seems that few updates from Microsoft are without problems these days, so the fact that a large version like Windows 10 May 2020 Update is causing problems should not shock anyone. A particularly annoying problem that is plagued by some people who have installed the update is that they are not automatically logged into your user account in Chrome. As an extent of this problem, site passwords are not being remembered. Problems were also encountered with the Edge and OneDrive credentials after upgrading to Windows 10 version 2004. See also: Several reports have surfaced on Chrome's support forum, with people complaining that Google Sync is broken, and that Chrome keeps signing them out of their accounts. As reported by Windows Latest, other related issues that users are experiencing include data related to browser extensions being deleted and cookies not saved. On Reddit there are also complaints that after installing Windows 10 May 2020 Update, there are similar problems with Edge – which is probably not surprisingly considering Edge and Chrome share the same engine these days. Other people are having problems with OneDrive forgetting login details. There are also problems Battle.net and the Windows 10 Mail app forgetting credentials. Microsoft has not yet acknowledged the issues, but there is a potential workaround for Chrome users. Start by killing Chrome tasks.exe, lock Windows by pressing the Windows and L key simultaneously, then sign back in and start Chrome again. It's not an ideal solution, but it's kind of a help until a proper fix materializes. Image credit: Sundry Photography/Shutterstock recently noticed a pattern of strange behavior with the OneDrive desktop client, specifically when a user logs in to a local profile for the first time. The OneDrive icon will be gray (clear) and not encribed, but when the user clicks the task tray icon to sign in, just get OneDrive not connected, and no warning to sign in. Is there any solution to solve this problem? Quick searchWhy isn't OneDrive signing in? OneDrive is a cloud storage service owned by Microsoft. It can securely store all your important files and access them from anywhere. OneDrive is an excellent cloud service, but due to its cloud-based character, it sometimes has errors. OneDrive isn't signed in when signing in is an issue many users encounter when using OneDrive. Typically, the following reasons can cause this to happen: Operating system error update. It is not connected to a good network. The version of that you are running is very old. An error occurred in the connection between Microsoft and the operating system. How to fix the problem OneDrive is not connected? There are several reasons why OneDrive won't be signed in. The following methods are all effective measures to resolve this problem. Method 1. Check out the connectionIf the OneDrive is stuck on login, this situation is probably caused by an incorrect or unstable network connection. First, you need to confirm your Internet connection using the following two methods. Make sure your power supply is connected correctly. If it's a wireless connection, make sure the router is working. You can also reconnect to the network by restarting the router. Start the browser and open some web pages at will. If your browser can successfully load these pages at normal speed, your network connection is normal. If there is a problem with the network, you can go to Settings > Network & Internet, click Network Troubleshooting to diagnose and fix the problem. Method two. Restart OneDrive clientThe problem may be caused by an error in the current boot process. Try restarting OneDrive working normally. Step one. Click the OneDrive button in the lower right corner of the desktop, click the More option and choose Close OneDrive. Step 2. Click the Start button on the desktop. Search OneDrive and select the top result to restart the client. Method 3. Update OneDrive manually Although the OneDrive app can be updated automatically, some users will turn off automatic updates. Outdated clients can cause many problems. This requires you to manually update the OneDrive app. Step one. Go to the OneDrive website, click Download, and install the latest client on your computer. Step two. Click Start on your computer. Search For OneDrive, click the highest result to start it. Method 4. Turn off security featuresIn rare cases, antivirus and firewalls can also prevent OneDrive from working properly. If you suspect this is the case, temporarily disable these security features to confirm.▀Disable antivirus softwareStep 1. Navigate to Windows Security, click the virus and threat protection on the left, and then find management settings at the bottom and click. Step two. Turn off the switch in Real-time protection▀Disable firewallStep 1. Navigate to Windows Security, click Firewall & Network Protection on the left, and click the Private network to continue. Step two. Turn off the switch in Windows Defender Firewall. Method 5. Turning off proxy settings OneDrive doesn't support proxy authentication, which may also be the reason OneDrive isn't connected to Windows 10. You can temporarily disable this feature to see if it resolves the issue. Step one. Go to Settings > Network & Internet > Proxy. Step 2. In automatic proxy configuration, Automatically detect settings: turn on, Use configuration script: turn off. In the manual proxy configuration, use a proxy server switch: turn off. Method 6. Reset OneDrive appIf you can reset OneDrive, this method can effectively fix multiple OneDrive errors. Step one. Click the Start button, look for command prompt, right-click, and select Run as administrator. Step two. Then type %localappdata%\Microsoft\OneDrive\onedrive.exe/reset, and then press Enter. Step 3. Then restart OneDrive and try to connect to your account. 3 Tips for Sync issues If the OneDrive connection and sync issue is not successfully resolved, it can be caused by more complicated reasons. Don't worry, we provide 3 solutions to help you. Tip 1. Switch to other storage solutions Instead of OneDrive Many users discover that using the OneDrive desktop client usually encounters problems, such as the OneDrive backup tab missing problem, OneDrive not syncing, and etc. are some common problems. If you're tired of spending time dealing with OneDrive errors, you can try switching to another storage solution. Google Drive and Dropbox, which are also cloud storage services, are good options. When you replace a cloud disk, you can use CBackupper to back up the data directly on OneDrive to the new cloud disk account. It can also combine cloud storage in accounts into a larger backup space for you. The following steps will use a OneDrive account and a Google Drive account as examples to show you how to use CBackupper for cloud and cloud backup. Step one. Start registering an account on the CBackupper homepage and sign in. Step two. Click Add clouds as shown, choose OneDrive and Google Drive to add separately, and click OK to confirm. Step three. To create a cloud-to-cloud backup task, you need to click Create Task on the Tasks tab. Step four. Then click Add Source, select OneDrive as the transfer source, and then click Add Destination, select Google Drive as the backup target, and click Start backup to start the task. Tip 2. Contact the OneDrive Support Team, or you can contact the Microsoft technical support team and seek your help. It's possible that the OneDrive error is caused by more complicated reasons. You can go to the support page and contact the team with your Microsoft account. You need to provide a description of the problem encountered. The support team will help you resolve the issue based on the server address, error code information, and information about other issues with your account. Tip 3. Recore to Pro Cloud Backup to avoid OneDrive issues completely combined with cloud storage services such as OneDrive, cloud backup services are more stable and secure. You can use the Windows PC cloud professional backup, such as the CBackupper client, to replace OneDrive. It not only provides a more secure and professional way to automatically back up your files in the cloud, but your payment plan is also more reasonable, providing you with the most cost-effective data protection service. Download now and you can try it for free for 15 days and enjoy 1000GB of backup space. %Note: CBackupper provides the most advanced services to ensure the security of Data. You don't have to worry about data leakage. In addition, CBackupper has already met GDPR requirements. Conclusion Under normal circumstances, the OneDrive problem is not connected can be repaired according to various methods mentioned in the article. If you're tired of constantly spending time solving various OneDrive issues, you can replace it with other cloud cloud storage And you can use CBackupper to back up OneDrive data to other cloud drives.
